Introduction

The Eastern Pacific Tropical Cyclone (EPTC) season is the most active of the tropical cyclone seasons in the world. The EPTC season is characterized by a high number of tropical storms and hurricanes that affect the western coast of Mexico and the southwestern United States. The EPTC season is also characterized by a high number of tropical storms and hurricanes that affect the southwestern United States and the western coast of Mexico.

Methodology

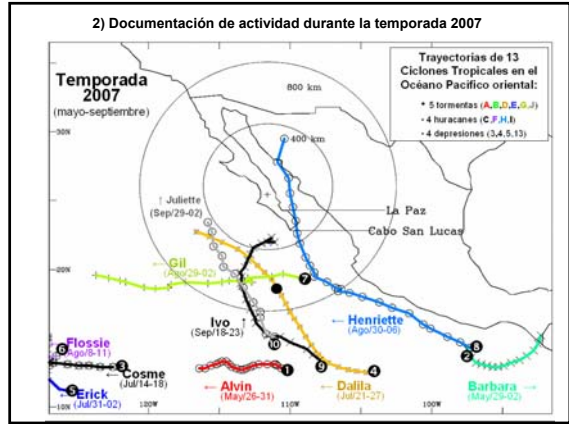

The methodology used in this study is based on the analysis of the EPTC season and the relationship between the EPTC season and the convective rainfall in the California Mexico region. The methodology used in this study is based on the analysis of the EPTC season and the relationship between the EPTC season and the convective rainfall in the California Mexico region.

Results

The results of this study show that there is a strong relationship between the EPTC season and the convective rainfall in the California Mexico region. The results of this study show that there is a strong relationship between the EPTC season and the convective rainfall in the California Mexico region.

Conclusions

The conclusions of this study are that the EPTC season has a significant impact on the convective rainfall in the California Mexico region. The conclusions of this study are that the EPTC season has a significant impact on the convective rainfall in the California Mexico region.

 21 de Septiembre del 2007

Ante el debilitamiento del huracán "Ivo" a tormenta tropical y por la tarde del sábado a depresión tropical, según el reporte del meteorológico nacional, su llegada a tierra de la península sólo podría dejar lluvias benéficas para la producción agrícola y ganadera; afirmó Luis Farfán Molina- doctor investigador y especialista en meteorología del CICESE durante la segunda reunión del Consejo de Protección Civil Municipal presidida por el alcalde Victor Castro Cosío.

6) Actividades durante los próximos 6-10 meses

- Presentaciones en AMS (abril) y AGU (**mayo**)
- Terminar y enviar manuscrito a revista arbitrada (**agosto**)
- Continuar análisis de lluvia en el noroeste de Mexico (**diciembre**)
- Instalación y operación de LDM (Unidata) en tiempo real (**junio**)
 - Imágenes de satélite GOES
 - Observaciones de superficie y altura
 - Modelos de predicción numérica (GFS y FNMOC)
- Reparación de mi página electrónica abierta al público (**septiembre**)
